

ACO ShowerDrain

 **ACO** *building
drainage*

Modern Bathroom Design

A new ideal - a barrier free shower environment that removes the restrictions imposed by conventional products. The wetroom concept enables a minimalist approach to design, creating space, allowing freedom of movement while providing a platform to bring out the very best in the products you have chosen.

Small But Significant Details

Attention to fine detail - such as drainage, is all important. Foremost it must be safe, ideally harmonious with your chosen finish, its capacity should comfortably exceed the shower output and it should be simple to maintain.

Not least it must integrate within the structural fabric of the wetroom, thereby offering ongoing, leak-proof performance for total peace of mind.

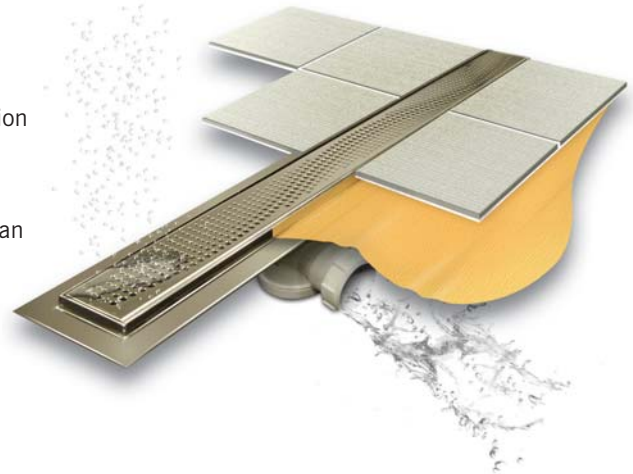

ACO Shower Channel Systems

Spoil yourself with the warm feeling of having carried out careful bathroom planning which pays attention to perfection and award-winning design in all the important details.

Austenitic stainless steel linear drainage channels with clean lines that characterise today's trends in wetroom design.

Available in two options:

- channel system for tiled floors
- channel system for vinyl floors

ACO Shower Gully Systems

A system for every conceivable situation: as with the ACO channel system, the ACO shower gully is fully compatible with sub-tile waterproofing compounds as well as conventional sheet flooring giving you unrivalled choice. For sheet floors, the ACO shower gully clamps the floor material directly into its body.

Gully body (incl. foul air trap) for tiled, resin and cementitious flooring applications
