

Roll-Out Dry Ridge System - Ridge Union

CODE **GD RR-RU**

Product Codes:

Ridge Union

GD RR-RU

Description

The Ridge Union is made up of an assembly of parts, as shown in the diagram. The parts are as follows:

1. Ridge Union Body, injection moulded in UV stabilised polypropylene
2. Foam Washer, made from expanded polyethylene
3. Clamp, made from 304 grade stainless steel
4. Neoprene Rubber Washer
5. Countersunk Screw, made from 304 grade stainless steel

The Ridge Union is designed to sit in the gaps between each of the ridge tiles, holding them in place. The product slides onto the end of the ridge tile and is flexible so that it bends to the shape of the tile, both round and angled, and then the next ridge tile slots into the other side of the Ridge Union and this continues along the full length of the ridge. Once the ridge tiles are all correctly rested in place, the unions are secured by driving the countersunk screw, assembled with the washers and clamp, through the hole in the top and into the horizontal batten below. The screws should be tightened down so that the clamp presses down on the ridge tile securing it in position.

The Ridge Union forms part of Manthorpe's Dry Ridge System which can be purchased as a kit, with all the parts required to cover a run of approximately 6 metres.
