

DURA

RIDGETILE

Dura are inline universal dryfix clay ridgetiles. The product is supplied with a stainless steel screw for the internal collar and a hex head “Tech screw” for the tail of the ridge, thus eliminating the requirement for mortar application and providing a very quick and robust fixing.

The ridgetile is produced by one of Europe’s largest and most innovative clay roof tile manufacturers, based in Portugal. The Dura Ridge System was designed to consider Irish weather conditions such as the frequency of very high winds. Traditional bedded (mortar) ridges can be subjected to loss of tiles in gales, particularly the end tiles facing edge-on to the wind. Dura ridge can withstand such weather conditions because of the simple but robust fixing method.

KEY ADVANTAGES USING DURA RIDGE

- Universal roofpitch, universal product compatibility (natural & fibre cement slates, tiles).
- Simple dryfix fixing system – unique to Irish market.
- Assured service life.
- Colour remains true.
- Accessories available (ends, junctions, etc).
- Stock readily available throughout Ireland – no lead time.
- Range of colours available – anthracite, natural red.

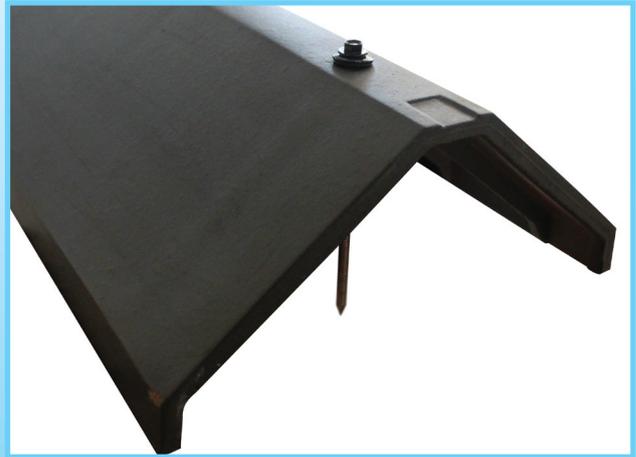

DURA

RIDGETILE

Dura Clay Ridgetiles are a no fuss roofing product. Simply fix your starter ridge to the ridgeboard and connect each ridgetile in sequence using the fixings provided. The Dura fixing system allows the installer to fix in any type of weather conditions, whilst also providing a thoroughly secure and maintenance free ridge system.

Dura Clay Ridgetile in anthracite.
